CNS Medical Director and Vice President Dr. Randall Benson is a globally regarded behavioral neurologist and imaging neuroscientist who is recognized for developing new, more effective treatments for incapacitating brain disorders (TBI, MS and stroke) through the use of advanced, functional MRI methods which provide unprecedented understanding of brain function and disease. Dr. Benson's research and clinical practice are strongly focused on disorders of the brain and cognition. Since 2004, Dr. Benson has worked to develop and validate advanced imaging methods to detect traumatic injuries in mild cases of closed head injury.
